SUMMARY

Full stack software engineer with 4 years of experience in React and Java with Spring Boot. Experienced in creating secure and responsive web apps from inception as well as distributed back-end services. Expertise in working with UX/UI Designers and agile, cross functional teams to build scalable, customer-facing apps that meet strict corporate security standards. Master's in Computer Science from University College Dublin specialising in Cloud Computing and Big Data.

TECHNICAL SKILLS

- Frontend:** React, TypeScript, HTML/CSS, JavaScript, Webpack, Babel (familiar), Vite, WebSockets
- Backend:** Core Java, J2EE, Spring, Spring Boot, JPA, Hibernate, RESTful APIs, Microservices
- Database:** PostgreSQL, MySQL, Redis, Elasticsearch
- DevOps & Tools:** Git, Docker, Kubernetes, CI/CD (GitLab, GitHub Actions), Jira, Confluence, Agile/Scrum
- Architecture & Security:** Domain-Driven Design (DDD), Event-Driven Architecture, OWASP, JWT Auth

EDUCATION

University College Dublin, Dublin, Ireland Sep 2024 – Aug 2025
Master in Computer Science (Negotiated Learning)

- Key Modules:** Machine Learning, Data Science, Generative AI, Cloud Computing, Data Visualization, Big Data.

St. Mary's Technical Campus, Kolkata, India Aug 2015 – Jul 2019
Bachelor of Technology in Computer Science

- CGPA: 7.61; Key Coursework: AI, Computer Networks, Data Management.
- Developed an e-commerce application using Laravel, emphasizing scalable backend services and user-focused features.

WORK EXPERIENCE

Fujitsu Consulting India, Pune, India Feb 2022 – Aug 2024
Assistant Application Developer

- Designed and maintained responsive user interfaces using React and TypeScript, directly connected with Java/Spring Boot backend services via RESTful APIs.
- Interacted with other disciplines including Product Management and QA in a daily Agile ceremony (stand-ups, sprints, and retrospectives), all managed through Jira and Confluence.
- Migrated legacy monolithic Java services to an event-driven Spring Cloud based distributed architecture, running on an OpenShift cluster; resulting in decreased API response times from 500ms down to under 100ms.
- Deployed full CI/CD processes with GitLab for Kubernetes clusters with zero downtime releases, shortening the release lifecycle for new features by 40%.
- Secured frontend and backend layers with data validation to meet OWASP and corporate security standards.

Avant-Grade Technologies, Kolkata, India Mar 2019 – Sep 2021
Junior Full-Stack Developer | Full-Stack Developer

- Built and deployed full-stack complex web application from scratch using React and Java/J2EE.
- Converted UX/UI wireframes into reusable, maintainable React components.
- Managed asynchronous data and client state using React and Webpack.
- Designed and implemented RESTful scalable web services using Core Java & Spring Boot and transformed business logic to database schematics (MySQL), integrated it with JPA and Hibernate.
- Assisted in backend debugging, problem diagnosis and capacity planning by configuring of production monitoring, alerting, centralised logging systems.

PROJECTS

Full-Stack E-Commerce Platform:

Tech Stack: React, TypeScript, Java, Spring Boot, PostgreSQL, Docker, Kubernetes

- Built a full-stack platform using React for dynamic UIs and Java/Spring Boot for backend services, successfully supporting throughput of over 10,000 requests per minute.
- Created reusable, maintainable frontend components based on React and TypeScript managing the asynchronous state and complex RESTful API calls.
- Implemented a Domain-Driven Design (DDD) backend using Spring Boot, decoupling services into independent bounded contexts with isolated PostgreSQL schemas.
- Secured the application by integrating Spring Security and JWT authentication at the API gateway, to ensure data confidentiality and aligning with strict internal security standards.
- Optimised deployment lifecycles by containerizing services with Docker and orchestrating via Kubernetes with Horizontal Pod Autoscaling, reducing infrastructure costs by 30%.

Developer Workflow Dashboard:

Tech Stack: React, TypeScript, WebSockets, RESTful APIs, Vite, Redis

- Developed a responsive SPA dashboard from scratch using React, Vite and TypeScript for a comprehensive and visual representation of the complex system states.
- Implemented REST APIs for task initiation and WebSockets for real-time front-end status updates.
- Built a grid-layout SPA that renders real-time workflow states and event history.
- Secured webhooks with HMAC SHA-256 to reject unauthorized payloads.
- Maintained project code using Git and established a CD pipeline to automate front-end tests and deployment.

Insurance Management System:

Tech Stack: Core Java, Spring Boot, JPA, MySQL, Apache Kafka, OpenFeign

- Created a microservices based backend platform using Core Java and Spring Boot that provides end-to-end management of lifecycle of Users, Policies and Claims.
- Maintained logical data segregation by developing segregated MySQL schema using JPA/Hibernate in strict compliance with financial regulations.
- Developed a mechanism of inter service data validation using synchronous approach (OpenFeign) and asynchronous events using Kafka (with at least once semantics).
- Developed resilient RESTful web services with application of circuit breakers and timeout patterns to guard against cascading failures.
- Configured full fledged application monitoring and health check endpoints using Spring Boot Actuator to enable backend troubleshooting.

AWARDS

- **UCD Advantage Award:** Recognised by University College Dublin for participation in co-curricular and community activities.
- **STAR Silver Awards:** Earned twice at Fujitsu for outstanding performance in system reliability and optimisations.
- Secured second position in Science Exhibition organised by National Service Scheme (NSS).
- Awarded First Position in the NSS Wall Magazine competition for the conceptualization and designed a visual narrative focused on global warming and environmental advocacy.

CERTIFICATION & EXTRA-CURRICULAR ACTIVITIES

- **Certifications:**
 - Full Stack Java Development
 - Data Science Foundation
 - Google SRE Fundamentals
- **Participations :**
 - GeeksforGeeks Hackathon: Competed in coding challenges, applying ML and backend skills.
 - HackeRank Netsoc 2024 Contest: Participated in problem-solving events focused on algorithms and data structures.
